Executive Summary

SinShield is in strong technical shape for a young site. The standout is engineering discipline: a Vue single-page app that prerenders fully-rendered HTML for every route, complete with unique titles, meta descriptions, canonicals, Open Graph and Twitter cards, and valid Organization, WebSite, SoftwareApplication, and Article schema. The blog is a genuine authority asset, with 2,000+ word articles that cite peer-reviewed research and lead with direct answers. The most urgent fix is technical hygiene at the edge: live URLs 301-redirect to a trailing-slash form and the redirect location is emitted over http, while every canonical and sitemap entry uses the no-slash https form, so crawlers are pointed at URLs that immediately redirect. Close behind, the Google Play links and SoftwareApplication schema still reference the placeholder package com.example.sinshield. The biggest untapped opportunity is answer-engine schema: the content is already question-led and snippet-ready, but there is no FAQPage, HowTo, or BreadcrumbList markup to capture featured snippets and rich results.

Dimension	Score	Status	Key Takeaway
SEO	8/10	Strong	Per-route prerendering, unique meta, and rich schema give a strong base; a trailing-slash/http redirect canonical mismatch and a placeholder Play link hold it back.
GEO	7/10	On Track	Deep, source-cited articles and clear Organization schema, but no linked social entity and health content attributed only to an org, not a credentialed person.
AEO	6/10	On Track	Question-titled articles and direct answers are ideal for answer boxes, yet no FAQPage, HowTo, or BreadcrumbList schema exists to capture them.
Combined	21/30		

Pages Audited

12 URLs and resources fetched and analyzed.

URL	Type	Notes
https://sinshield.app/	Homepage	Prerendered; Organization + WebSite schema; single H1; complete OG/Twitter
https://sinshield.app/products	Products index	Prerendered; Organization schema; breadcrumb nav (no schema)
https://sinshield.app/products/android	Product page	SoftwareApplication schema; install steps not marked up as HowTo; Play link is placeholder
https://sinshield.app/blog	Blog index	Prerendered; H1 is the featured article title, not a page-identity H1
https://sinshield.app/blog/does-porn-lower-your-iq	Article	~2,100 words; Article schema; cited PubMed sources; author + date
https://sinshield.app/blog/porn-on-x	Article	Question-titled; Article schema; ideal FAQ candidate
https://sinshield.app/blog/benefits-of-quitting-porn	Article	List-structured; Article schema; author + date
https://sinshield.app/blog/countries-where-porn-is-illegal	Article	Table-suitable content; Article schema
https://sinshield.app/blog/best-accountability-apps-to-quit-porn	Article	Listicle; Article schema; strong AEO candidate
https://sinshield.app/blog/how-to-break-the-scroll-trigger-loop	Article	How-to content; Article schema; HowTo schema candidate
https://sinshield.app/robots.txt	Robots	Permissive (Allow: /) with correct sitemap pointer
https://sinshield.app/sitemap.xml	Sitemap	10 URLs listed; no lastmod dates; URLs lack trailing slash that live pages redirect to

SEO Analysis

Score: 8/10 — Strong

Technical On-Page

Signal	Finding	Status
Prerendering	Vue SPA ships fully-rendered per-route HTML to crawlers via a prerender script. Rare and excellent.	Good
Title tags	Unique, keyword-led, well-sized per page, e.g. "SinShield — Private On-Device Adult Content Blocker".	Good
Meta descriptions	Present, unique, compelling, ~150-160 chars on every route.	Good
H1 hierarchy	Single H1 on marketing pages. Blog index H1 is the featured article title, not "SinShield Blog".	Needs Attention
Canonical tags	Self-referencing canonicals present, but they use no trailing slash while live URLs 301 to a trailing-slash form.	Needs Attention
Redirects / HTTPS	Live URLs 301 to a trailing-slash version and the redirect Location is emitted as http:// (protocol downgrade in chain).	Needs Attention
Viewport / mobile	width=device-width viewport meta present site-wide.	Good
Open Graph / Twitter	Full og: and twitter: card set on every route, with summary_large_image on articles.	Good
Image alt text	Article thumbnails carry descriptive alt text (thumbnailAlt) in prerendered HTML.	Good
Internal linking	Clear CTAs and breadcrumb navs; descriptive anchors ("SinShield for Android", "Get Started").	Good
URL structure	Clean, readable, keyword-bearing slugs (e.g. /blog/does-porn-lower-your-iq).	Good
robots.txt	Permissive Allow: / with a valid	Good

Signal	Finding	Status
	Sitemap pointer.	
XML sitemap	10 URLs present, but no lastmod dates and slugs omit the trailing slash live pages redirect to.	Needs Attention

Content Quality

Signal	Finding	Status
Article depth	Flagship articles run ~2,000+ words with structured sections, lists, and a "short answer" lede.	Good
Marketing page depth	Home ~450-500 words; product/android pages concise. Adequate but thin vs. the blog.	Needs Attention
Keyword coverage	Topic and semantic terms (block adult content, on-device, privacy, Instagram, X, DNS) are clearly established.	Good
Freshness signals	Visible publish dates on articles; dateModified equals datePublished (no update signal yet).	Needs Attention
Readability	Scannable with subheadings, ordered/unordered lists, and short paragraphs.	Good

Structured Data

Signal	Finding	Status
Organization	Present site-wide with name, url, logo, description, contactPoint email.	Good
WebSite	Present on the homepage.	Good
SoftwareApplication	Present on /products/android with offers, operatingSystem, applicationCategory, price 0.	Good
Article	On all 6 blog posts with headline, description, image, dates, author, publisher, mainEntityOfPage.	Good
downloadUrl integrity	SoftwareApplication downloadUrl/installUrl point to placeholder package	Needs Attention

Signal	Finding	Status
	com.example.sinshield.	
BreadcrumbList	Breadcrumb navs exist as HTML but are not marked up with BreadcrumbList schema.	Missing

GEO Analysis

Score: 7/10 — On Track

E-E-A-T Assessment

Signal	Finding	Status
About / entity clarity	Brand named consistently; purpose stated plainly; Organization schema declares the entity.	Good
Contact info	support@sinshield.app exposed via ContactPoint schema.	Good
Author credentials	All content attributed to "SinShield Editorial" (Organization). No named, credentialed human author or reviewer.	Needs Attention
Trust signals	No testimonials, reviews, press, or ratings yet (understandable for a new app, but a GEO gap).	Needs Attention
sameAs / social graph	Organization.sameAs is empty (socialProfiles = []); no social profiles link back to strengthen the entity.	Missing

Content for AI Synthesis

Signal	Finding	Status
Factual density	Articles carry specific claims, mechanisms, and study references AI engines can cite.	Good
Source citation	External authoritative sources (PubMed peer-reviewed studies) cited with links.	Good
Clear claims up front	Articles lead with a direct "short answer" before nuance. Ideal for AI extraction.	Good
Comprehensiveness	Topics addressed thoroughly with counter-points and caveats.	Good
Originality / POV	Consistent, distinctive editorial voice and framing (practical, non-judgmental).	Good

Technical GEO

Signal	Finding	Status
HTTPS	Site served over HTTPS.	Good
Crawlability	Prerendered HTML means AI crawlers get full content without executing JS.	Good
Structured data depth	Rich core types, but no Author/Person, FAQPage, or SpeakableSpecification to deepen the entity graph.	Needs Attention
Redirect hygiene	http:// in the redirect Location can confuse AI crawlers on the canonical protocol.	Needs Attention

AEO Analysis

Score: 6/10 — On Track

Featured Snippet Eligibility

Signal	Finding	Status
Question-phrased headings	Article titles and H2s use natural questions ("Does Porn Lower Your IQ?", "Is It Allowed?").	Good
Direct answer paragraphs	A concise "short answer" block sits directly under the question. Snippet-ready.	Good
List content	Numbered and bulleted lists throughout, eligible for list snippets.	Good
Table content	No comparison tables yet; the renderer supports them (e.g. countries / app comparisons).	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQPage schema	No FAQ schema anywhere, despite question-titled articles and a product page that invites FAQs.	Missing
HowTo schema	Numbered "How SinShield Works" and install steps are not marked up as HowTo.	Missing
Question-phrased headings	Present in content (see above). Content layer is ready for schema.	Good
Speakable schema	No SpeakableSpecification for voice-friendly summaries.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	Content reads naturally and answers real user questions.	Good
Long-tail coverage	Articles target specific who/what/why/how queries well.	Good
Local signals	Not applicable; SinShield is a	Good

Signal	Finding	Status
	global on-device app, not a local business.	

Priority Recommendations

Ordered by priority. Effort and impact are relative estimates.

Priority	Issue	Dimension	Effort	Impact
Critical	Redirect chain downgrades to http:// and canonicals point to no-slash URLs that 301 to trailing-slash	SEO	Low	High
Critical	Placeholder Google Play package com.example.sinshield in install links and SoftwareApplication schema	SEO/GEO	Low	High
High	Add FAQPage schema to product page and question-titled articles	AEO	Medium	High
High	Add BreadcrumbList schema to existing breadcrumb navs	SEO/AEO	Low	Medium
High	Attribute health-adjacent (YMYL) articles to a named author/reviewer with credentials	GEO	Medium	High
Medium	Add HowTo schema to "How SinShield Works" and the install steps	AEO	Low	Medium
Medium	Populate Organization.sameAs with real social/profile URLs to strengthen the entity graph	GEO	Low	Medium
Medium	Give the blog	SEO	Low	Medium

Priority	Issue	Dimension	Effort	Impact
	index a page-identity H1 ("SinShield Blog") instead of the featured article title			
Quick Win	Add lastmod dates to sitemap.xml (and align slugs with the trailing-slash live form)	SEO	Low	Medium
Quick Win	Use a larger 1200x630 og:image so summary_large_image cards render fully	SEO	Low	Low
Quick Win	Add comparison tables to listicle/country articles for table-snippet eligibility	AEO	Low	Medium

What's Working Well

Strength	Evidence from the crawl
Per-route prerendering	Every route (home, products, android, blog, 6 articles) ships fully-rendered HTML with content, not an empty SPA shell. This alone puts the site ahead of most Vue/React marketing sites for crawlability.
Complete per-page metadata	Unique titles, meta descriptions, canonicals, and full Open Graph + Twitter card sets are generated for every route by the prerender pipeline.
Rich, valid schema coverage	Organization, WebSite, SoftwareApplication, and Article JSON-LD are present and well-formed across the shipped HTML.
Genuinely authoritative articles	Flagship posts run 2,000+ words, cite peer-reviewed PubMed research with links, and lead with a direct answer, exactly what AI answer engines prefer to cite.
AEO-ready content layer	Question-phrased headings and "short answer" ledes mean the content is already structured for featured snippets; only the schema layer is missing.

Strength	Evidence from the crawl
Clean technical hygiene	HTTPS, permissive robots.txt with a sitemap pointer, clean keyword-bearing URLs, and descriptive image alt text.

Glossary

SEO — Search Engine Optimization

Optimizing a site so traditional search engines (Google, Bing) can crawl, understand, and rank its pages: titles, meta, headings, schema, internal links, and content quality.

GEO — Generative Engine Optimization

Optimizing so AI answer engines (Perplexity, ChatGPT Search, Google AI Overviews, Gemini) recognize your brand as a trustworthy entity and cite your pages when synthesizing answers. Rewards authority, citations, and clear structured data.

AEO — Answer Engine Optimization

Optimizing so search and voice assistants can extract a direct answer: question-phrased headings, concise answer paragraphs, and FAQ/HowTo schema that power featured snippets and voice results.
